

High purity

Offering a complete range of Boron Nitride powders, ESK have created high purity BN grades especially for cosmetics. Improved formulations become softer, easier to apply, give better coverage and adherence to the skin. The powders can also be used to re-enforce products such as lipsticks and pencils.

BORONEIGE® boron nitride powders are excellently suited for all the latest innovative formulations in the colour cosmetics and skin care sectors. Different particle sizes and crystal morphologies open up a great choice of different optical effects - from opaque to translucent. The hydrophobic property of all BN qualities can be increased by extra surface treatment to stabilize water in oil, or oil in water emulsions.

Amazon treasure

The Earth's natural botanical plants conceal many treasures. AGIPAL, French supplier of natural products since 1962, is delighted to present to the cosmetic industry a new oil from Amazonia: INCA INCHI oil, rich in omega 3 and omega 6 by its nature.

The Omega Project has been conceived to develop the Inca Inchi organic crops. The project will have a beneficial impact on the Amazonian ecology.

Generating better economic results, in addition to operational advantages, to improve the standard of living of farmers, and to contribute to the World's food and health programme.

Inca Inchi contains 49% Omega 3 and 38% Omega 6, which allows it to be a good restructuration, and calming for dry and damaged skin. Thanks to the presence of Vitamin A and E, this oil also has antioxidant properties.

Natural butter

ZENITECH are introducing their latest products at in-cosmetics 2007. Two new natural butters, lime butter and lemon butter.

Both products are composed of natural ingredients, with the fragrance being derived from the cold pressed lime and lemon. These butters not only have a natural fragrance, but also have superb TEWL qualities, and are easily formulated into skin, sun, hair or color products.

Clear as clay

in-cosmetics 2007 will host the European launch of R.T Vanderbilt's newest addition to a well-known family of Veegum® smectite clay products, Vanatural® is natural white bentonite clay, water-washed for purity and performance. Its fine granule form disperses easily and hydrates rapidly. Vanatural® is recommended as a suspension stabiliser, emulsion optimiser, and rheology modifier for all topical products. It is particularly suited for natural personal care products.
